

ADP1823, APD2106 and ADP1821 Reference Design

Preliminary Technical Data

FCDC 00043

FEATURES

Six Output Voltages: 1.2 V, 1.8 V, 2.5 V, 3.3 V, 5 V, 12 V

Output Current: 1 A to 4.5 A

Input voltage: 14.4-20.0 V

Ripple 2% ppk of Output Voltage

Transient step $\pm 5\%$, 50% max load

ADP1823, APD2106 AND ADP1821 REFERENCE DESIGN DESCRIPTION

This ADP1823, APD2106 and ADP1821 Reference Design uses 14.4 V to 20.0 V for the input voltage. The output voltages and currents are as follows:

- $V_{OUT1} = 1.2$ V with a maximum output current of 3.9 A,
- $V_{OUT2} = 1.8$ V with a maximum output current of 1.3 A,
- $V_{OUT3} = 3.3$ V with a maximum output current of 4.5 A,
- $V_{OUT4} = 5.0$ V with a maximum output current of 3.84 A,
- $V_{OUT5} = 2.5$ V with a maximum output current of 1.025 A and
- $V_{OUT6} = 12$ V with a maximum output current of 1.2 A.

Design criteria are for coincidental tracking of V_{OUT1} , V_{OUT2} and V_{OUT3} with V_{OUT4} for both turn on and turn off. The ripple and transient assumptions are 2% peak to peak voltage ripple and 5% deviation due to 50% instantaneous load step, except for V_{OUT1} which is 1.5% peak to peak ripple and 5% deviation due to 25% instantaneous load step. The switching frequency is fixed at 300 kHz for V_{OUT1} , V_{OUT2} , V_{OUT3} , V_{OUT4} and V_{OUT6} . V_{OUT5} switches at a fixed frequency of 1.2 MHz

Rev. A

REVISION HISTORY

7/3/2007—Revision 0: Initial Version

7/4/2007—Revision 1: Added snubber and clamp zener on CS pin on 12 V SEPIC. Changed input voltage to max of 20 V.

7/5/2007—Revision 2: Changed minimum input voltage to 14.4 V. Changed 12 V output to buck converter for higher efficiency and smaller footprint.

GENERAL DESCRIPTION

ADP1823

The ADP1823 is a versatile, dual output, interleaved, synchronous PWM buck controller that generates two independent outputs from an input voltage of 3.7 V to 20 V. Each channel can be configured to provide output voltage from 0.6V to 85% of the input voltage. The two channels operate 180° out of phase, which reduces the current stress on the input capacitor and allows the use of a smaller and lower cost input capacitor.

The ADP1823 operates at a pin-selectable fixed switching frequency of either 300 kHz or 600 kHz. For some noise sensitive applications, it can also be synchronized to an external clock to achieve switching frequency between 300 kHz and 1 MHz. The switching frequency chosen is 300 kHz to get good efficiency over a wide range of input and output conditions.

The ADP1823 includes an adjustable soft start to limit input inrush current, voltage tracking for sequencing or DDR termination, independent power-good output, and a power enable pin. It also provides current-limit and short-circuit protection by sensing the voltage on the synchronous MOSFET.

ADP2106

The ADP2106 is a versatile, single output, synchronous PWM buck controller with integrated synchronous FETs that generates a single output from an input voltage of 2.7 V to 5.5 V. The controller can be configured to provide output voltage from 0.8 V to the input voltage with an output current up to 1.5 A.

The ADP2106 operates at a fixed switching frequency of 1.2 MHz to reduce component size.

The ADP2106 includes an adjustable soft start to limit input inrush current. Inherent to its current mode design it provides current-limit and short-circuit protection by sensing the voltage on the synchronous MOSFET.

ADP1821

The ADP1821 is a versatile and inexpensive, synchronous, pulse width-modulated (PWM), voltage-mode, step-down controller. It drives an all N-channel power stage to regulate an output voltage as low as 0.6 V. The ADP1821 can be configured to provide output voltages from 0.6 V to 85% of the input voltage and is sized to handle large MOSFETs for point-of-load regulators. The ADP1821 is well suited for a wide range of high power applications, such as DSP and processor core power in telecom, medical imaging, high performance servers, and industrial applications. It operates from a 3.0 V to 5.5 V supply with a power input voltage ranging from 1.0 V to 24 V. The ADP1821 operates at a pin-selectable, fixed switching frequency of either 300 kHz or 600 kHz, minimizing external component size and cost. For noise-sensitive applications, it can be synchronized to an external clock to achieve switching frequencies between 300 kHz and 1.2 MHz. The ADP1821 includes soft start protection to limit the inrush current from the input supply during startup, reverse current protection during soft start for precharged outputs, as well as a unique adjustable lossless current-limit scheme utilizing external MOSFET sensing. The ADP1821 operates over the -40°C to +85°C temperature range and is available in a 16-lead QSOP.

SCHEMATIC
