

RELIABILITY REPORT FOR MAX4367ETA+ PLASTIC ENCAPSULATED DEVICES

December 3, 2009

## MAXIM INTEGRATED PRODUCTS

120 SAN GABRIEL DR. SUNNYVALE, CA 94086

| Approved by                       |
|-----------------------------------|
| Ken Wendel                        |
| Quality Assurance                 |
| Director, Reliability Engineering |

#### Conclusion

The MAX4367ETA+ successfully meets the quality and reliability standards required of all Maxim products. In addition, Maxim's continuous reliability monitoring program ensures that all outgoing product will continue to meet Maxim's quality and reliability standards.

#### **Table of Contents**

- I. ......Device Description V. .....Quality Assurance Information
- II. ......Manufacturing Information
- III. ......Packaging Information
- .....Attachments

VI. ......Reliability Evaluation

- I. Device Description
  - A. General

The MAX4366/MAX4367/MAX4368 are bridged audio power amplifiers intended for devices with internal speakers and headsets. The MAX4366/MAX4367/MAX4368 are capable of delivering 330mW of continuous power into a 32 load, or 200mW into a 16 load with 1% THD+N from a single 5V supply. The MAX4366/MAX4367/MAX4368 bridged outputs eliminate the need for output-coupling capacitors minimizing external component count. The MAX4366/MAX4367/MAX4368 also feature a low-power shutdown mode, clickless power-up/power-down and internal DC bias generation. The MAX4366 is a unity-gain stable, programmable gain amplifier. The MAX4367/MAX4368 feature internally preset gains of 2V/V and 3V/V, respectively. All devices are available in space-saving 8-pin TDFN and 8-bump UCSP(tm) chip-scale packages.

II. Manufacturing Information

 A. Description/Function:
 330mW, Ultra-Small, Audio Power Amplifiers with Shutdown

 B. Process:
 CB3

 C. Number of Device Transistors:
 CB3

January 26, 2002

Philippines, China, Thailand, Malaysia

- Oregon
- D. Fabrication Location:E. Assembly Location:
- F. Date of Initial Production:

## III. Packaging Information

| A. Package Type:  | 8-pin TDFN 3x3           |
|---|--------------------------|
| B. Lead Frame:  | Copper                   |
| C. Lead Finish:   | 100% matte Tin           |
| D. Die Attach:  | Conductive Epoxy         |
| E. Bondwire:  | Au (1.0 mil dia.)        |
| F. Mold Material:   | Epoxy with silica filler |
| G. Assembly Diagram:  | #05-2501-0138            |
| H. Flammability Rating:   | Class UL94-V0            |
| I. Classification of Moisture Sensitivity per<br>JEDEC standard J-STD-020-C | Level 1                  |
| J. Single Layer Theta Ja:   | 54°C/W                   |
| K. Single Layer Theta Jc:   | 8.3°C/W                  |
| L. Multi Layer Theta Ja:  | 41°C/W                   |
| M. Multi Layer Theta Jc:  | 8.3°C/W                  |

#### IV. Die Information

| A. Dimensions:             | 63 X 63 mils   |
|----------------------------|--|
| B. Passivation:            | Si <sub>3</sub> N <sub>4</sub> (Silicon nitride)               |
| C. Interconnect:           | Au   |
| D. Backside Metallization: | None   |
| E. Minimum Metal Width:    | Metal1 = 0.5 / Metal2 = 0.6 / Metal3 = 0.6 microns (as drawn)  |
| F. Minimum Metal Spacing:  | Metal1 = 0.45 / Metal2 = 0.5 / Metal3 = 0.6 microns (as drawn) |
| G. Bondpad Dimensions:     | 5 mil. Sq.   |
| H. Isolation Dielectric:   | SiO <sub>2</sub>   |
| I. Die Separation Method:  | Wafer Saw  |

#### V. Quality Assurance Information

| Α. | Quality Assurance Contacts:    | Ken Wendel (Director, Reliability Engineering)                  |
|----|--------------------------------|---|
|    |                                | Bryan Preeshl (Managing Director of QA)                         |
| В. | Outgoing Inspection Level:     | 0.1% for all electrical parameters guaranteed by the Datasheet. |
|    |                                | 0.1% For all Visual Defects.                                    |
| C. | Observed Outgoing Defect Rate: | < 50 ppm  |
| D. | Sampling Plan:                 | Mil-Std-105D  |

## VI. Reliability Evaluation

A. Accelerated Life Test

The results of the 150°C biased (static) life test are shown in Table 1. Using these results, the Failure Rate (  $\lambda$ ) is calculated as follows:

 $\lambda = \underbrace{1}_{\text{MTTF}} = \underbrace{\frac{1.83}{192 \times 4340 \times 80 \times 2}}_{(\text{where } 4340 = \text{Temperature Acceleration factor assuming an activation energy of 0.8eV})$  $\lambda = 13.4 \times 10^{-9}$  $\lambda = 13.4 \text{ F.I.T. (60\% confidence level @ 25°C)}$ 

The following failure rate represents data collected from Maxim"s reliability monitor program. Maxim performs quarterly life test monitors on its processes. This data is published in the Reliability Report found at http://www.maxim-ic.com/qa/reliability/monitor. Cumulative monitor data for the CB3 Process results in a FIT Rate of 0.25 @ 25C and 4.38 @ 55C (0.8 eV, 60% UCL)

## B. Moisture Resistance Tests

The industry standard 85°C/85%RH or HAST testing is monitored per device process once a quarter.

C. E.S.D. and Latch-Up Testing

The OX70-1 die type has been found to have all pins able to withstand a HBM transient pulse of +/-2500 V per Mil-Std 883 Method 3015.7. Latch-Up testing has shown that this device withstands a current of +/-250 mA.

# Table 1 Reliability Evaluation Test Results

### MAX4367ETA+

| TEST ITEM        | TEST CONDITION  | FAILURE<br>IDENTIFICATION | SAMPLE SIZE | NUMBER OF<br>FAILURES |  |
|------------------|-----------------|---------------------------|-------------|-----------------------|--|
